

# Joe Bonino

Grand Rapids, MI | [jbonino@protonmail.com](mailto:jbonino@protonmail.com)

## Summary

Senior backend engineer with 5+ years building and operating production systems in payments, loyalty/rewards, and IoT domains. AWS Certified Solutions Architect who takes ownership of complex problems end to end, from architecture through shipping, and is drawn to Owner's mission of building AI-native systems that let independent local businesses compete and grow. Driven by continuous learning and creative problem-solving, and energized by teams who take pride in their work and push each other to grow.

## Skills

- **Languages:** TypeScript/JavaScript, C#, Python
- **Backend & Distributed Systems:** Node.js, Temporal Workflows, serverless APIs, event-driven architecture, Kafka
- **Data:** CosmosDB, DynamoDB, SQL, Azure Synapse Analytics
- **Infrastructure:** AWS Lambda, AWS CDK, Azure Functions, Terraform, Docker, ECS
- **CI/CD:** GitHub Actions, Azure DevOps Pipelines
- **Certifications:** AWS Certified Solutions Architect – Associate

## Projects

### Grove — [grove-jbonino.fly.dev](https://grove-jbonino.fly.dev)

Restaurant ordering + loyalty rewards demo (Vue 3, Express, MongoDB, TypeScript, Stripe), built solo and agentically in a single work day, end to end: schema/API design, ordering and loyalty flows, an admin panel, Stripe payments, 250+ automated tests (Vitest, Supertest, Playwright E2E), and Fly.io deployment. See the live walkthrough and build process at [grove-jbonino.fly.dev/readme](https://grove-jbonino.fly.dev/readme).

## Experience

### Cloud Consultant — Meijer Grocery & Twistthink (2021–Present)

- Architected and built backend systems authorizing and capturing all meijer.com payments (credit card, SNAP, Apple Pay, WIC) using Temporal workflows, Temporal Nexus integration, serverless APIs, CosmosDB, Kafka, and Terraform.
- Built and operated MPerks, meijer.com's reward management system: product/UPC-based rewards, point-of-sale rewards across terminal/store/gas station, and reward point balance management, using Azure Functions, CosmosDB, C#, and Azure Synapse Analytics.
- Delivered a real-time air quality IoT analytics platform for landfill and factory sensors, with multitenant support/permissions and configurable alarms, using Python, pandas, SQLAlchemy, Docker, AWS Lambda, and AWS CDK.
- Owned full development lifecycle under SAFe methodology, from design through production shipping, including CI/CD pipelines via GitHub Actions and Azure DevOps.

### Fullstack Developer — Vervint (2018–2021)

- Built the AWS serverless backend for Traeger Grills' IoT grill fleet, delivering real-time command-and-control, real-time analytics, and over-the-air updates using Node.js, API Gateway, Kinesis Analytics, DynamoDB, Lambda, ECS, and RDS with the serverless framework.

- Delivered fullstack features for Bissell Connect's IoT devices (vacuums, air purifiers), including device pairing, real-time command-and-control, and cleaning history aggregation/display, using Xamarin, Node.js, AWS Lambda, DynamoDB, and IoT Gateway.
- Partnered directly with clients, product owners, architects, and designers across the full delivery lifecycle under SAFe methodology.

---

Worked a summer of meat prep at a local BBQ restaurant; also spent summers market gardening on small organic farms (and assisting with their software).
